MOMENTS
of light.

MOMENTS OF LIGHT FOR YOUR HOME.

There is light that simply illuminates – and there is light that transforms spaces, guides the eye, makes colours come alive, creates atmosphere and turns places into a home. Light that brings architecture to life and makes moments tangible.

We call these moments: **MOMENTS OF LIGHT.**

They are the moments of light that accompany us throughout the day – from the first gentle awakening in the morning to the final quiet retreat in the evening. Light that energizes, calms, supports and connects.

For your individually designed moments of light, we develop high-quality lighting solutions for furniture and room illumination that combine design, quality and intelligent technology – individually adaptable to time, surroundings and human needs.

feels like coming home.

Because home is a feeling – not just a place.

LIGHT FOR
GENTLE MORNINGS

LIGHT FOR
FOCUSING

LIGHT FOR
DREAMING

LIGHT FOR
GETTING TOGETHER

FOLLOW THE RHYTHM.

Light influences our biorhythm, our well-being and our mood.

Human Centric Lighting adapts to the changing light of the day –energizing in the morning, helping us focus during the day, and calming in the evening.

In this way, light becomes a natural companion through our daily lives.

In modern architecture, this means designing spaces not only with form and material, but with light that senses what we need.

FOR PEOPLE. FOR MOMENTS. FOR LIFE.

LIGHT FOR A GENTLE BEGINNING.

The day begins with a sense of flow.

Subtle light brings tranquillity, softens the harshness of the morning and gives the moment what it needs: a sense of calm. Even before the day's routine begins, that feeling of being at home sets in – in the right light.

Lighting with just the right intensity and colour: warm white, soft and inviting for unwinding and relaxing; cool white brightness for working.

Thanks to stepless dimming and colour temperature adjustment, it is not just the brightness that changes – the atmosphere also becomes noticeably calmer, colours appear warmer, and shadows softer.

LIGHT FOR FOCUS.

Work with concentration without getting tired: structured, cool white light promotes alertness and prevents eye strain.

Perfect for keeping a clear head – for home offices, desks or creative spaces.

In the evening, the light can be switched to a soft, warm white to help you wind down and prepare for a restful night's sleep – ideal for relaxed browsing on the internet.

Thanks to Smart Home integration, lighting control becomes intuitive and intelligent. Using the app, you can control the lighting easily and to suit your individual needs directly via your smartphone.

This makes lighting part of the connected home. Automated, scene-controlled, and customisable at any time – for greater comfort, efficiency and ambience in everyday life.

SMART FREEDOM – LIGHT THAT THINKS FOR ITSELF.

Control your lighting intuitively: via app, gestures or voice commands.

Save scenes, adjust light colour and brightness – at any time.

ONE SYSTEM FOR EVERYTHING.

TECHNOLOGY THAT SUPPORTS,
RATHER THAN OVERWHELMING YOU.

Of course, the lighting can also be controlled using various types of switches and motion detectors. Tailored entirely to your needs.

THE LANGUAGE OF LIGHT.

Light makes colours speak.

GOOD FOOD STARTS WITH WHAT YOU SEE.

Colours only look vibrant when they are rendered naturally by light.

A high colour rendering index (CRI) ensures that colours appear as they really are.

CRI 80

CRI 97

Not dull. Not artificial. But **RICH, CLEAR, BRIGHT.**

From a CRI of 90 upwards, materials reveal their true colour—nuanced, deep and precise

TARGETED. MINIMALIST.
PRESENT.

Furniture lighting that makes an impact – without
drawing attention to itself.

LIGHT FOR STORAGE SPACE.

When drawers light up and shelves are illuminated, searching becomes finding.

Everything is visible, everything in its true colour – perfectly lit for a quick overview and intuitive guidance

SEE MORE. EXPERIENCE MORE.

In the dressing room, on the shelf or in the kitchen – integrated lighting brings structure to everyday life, highlights what’s inside and brings spaces to life. It emphasises beauty and accompanies you through the moment.

MOMENTS OF LIGHT AS ART.

SHAPING SPACES.
LIVING LIGHT.

LIGHT FOR LIFE AND
COMING TOGETHER.

NEVER TOO BRIGHT. ALWAYS PRESENT.

Light has a direct effect on our biorhythm, our well-being, our mood and our performance.

Warm white (2700–3300K) creates a sense of warmth, relaxation and cosiness. Colours appear gentle, and textures are rendered softly.

Neutral white (3000–5000K) has an energizing, stimulating effect.

Cool white (from 5000K) promotes concentration, increases alertness and performance. Colours appear clear, and textures are accentuated.

Correlated colour temperature (CCT) enables the right light colour to be selected depending on the time of day and the activity.

LIGHT FOR RELAXING & DREAMING.

The evening is not a time for brightness, but for light that radiates tranquillity and does not seek attention. Whether you're winding down the day in a relaxed manner or drifting gently off to sleep and into your dreams.

With variable colour temperature and dimmable brightness, multiwhite technology creates the perfect atmosphere – for light that softens as the day draws to a close and becomes warmer when the moment calls for it.
